

## Deployment instructions

1. Package Spring boot App – mvn clean package / mvn clean install  
this will generate the jar in target folder.
2. Need to make sure the s3 bucket created
3. Create the IAM Role for EC2 to access the s3 bucket
4. Create the EC2 instance
5. Attached the role to EC2
6. Install Java on EC2
7. We used WinSCP to transfer the Jar from local to ec2, so WinSCP to transfer the jar
8. Putty to run the jar (need to add ssh inbound in SG to access the EC2)
